

## Overview

The Pipeline Wall-Thickness Software is a tool designed for analyzing and evaluating the wall thickness of pipelines. It provides a user-friendly interface for importing pipeline data, performing calculations, and generating reports. This software is particularly useful for pipeline integrity management, ensuring compliance with safety standards, and making informed decisions about maintenance and repairs.

## Features

**Import Pipeline Data:** Easily import pipeline data from various sources, including GIS files, CAD drawings, or manual input.

**Interactive Visualization:** Visualize pipeline geometry in 2D and 3D for a better understanding of the structure.

**Wall Thickness Analysis:** Perform wall thickness calculations based on industry standards and user-defined criteria.

**Report Generation:** Generate detailed reports with comprehensive information about the pipeline, including thickness profiles, potential weak points, and recommended actions.

**User Configurable:** Customize analysis parameters and criteria based on specific project requirements.

**Multi-Platform Compatibility:** The software is compatible with Windows, macOS, and Linux operating systems.

## Getting Started

### Prerequisites

Ensure that Python is installed on your system.

Install the required dependencies by running:

```
bash
Copy code
pip install -r requirements.txt
Installation
Clone the repository:
```

```
bash
Copy code
git clone https://github.com/your-username/pipeline-wall-thickness.git
Change to the project directory:
```

```
bash
Copy code
cd pipeline-wall-thickness
Run the software:
```

```
bash
Copy code
python main.py
```

## Usage

Launch the application and use the intuitive graphical user interface to import pipeline data.

Configure analysis parameters, such as material properties, safety factors, and inspection data.

Initiate the wall thickness analysis process.

Explore the visualizations and reports generated by the software.

## Contributing

Contributions are welcome! If you find any bugs or have suggestions for improvements, please open an issue or submit a pull request.
